*Gettysburg Hospital 147 Gettys Street Gettysburg, PA 717-334-2121	24 hour emergency care

**\*Please note that the York/Adams Drug and Alcohol Commission does not contract with these providers.**

## Level of Care Assessment

Assessments (level of care assessments) are designed to ascertain treatment needs based on the degree and severity of alcohol and other drug use/abuse through the development of a comprehensive confidential personal history, including significant medical, social, occupational, educational, and family information.

An assessment is required for all individuals (with the exception of emergency services such as detox) in order to access drug and alcohol treatment as an assessment determines the proper level of treatment services.

Assessments are provided at no cost to the client (with the exception of the DUI offender required to obtain a level of care assessment as part of the criminal process).

### **Assessment scheduling:**

*Please note: Individuals in a crisis state or in need of detox, should access emergency services as listed on page 3 of this directory. An assessment is not necessary to access crisis/detox services.*

### **Individuals Who Reside in the Central York area:**

Contact the White Deer Run York Assessment Center (WDR-YAC), which is staffed 8:00 am – 4:30 pm to schedule an assessment.

White Deer Run York Assessment Center:

257 East Market Street, York PA 17403

Phone: 717-668-8035 Fax: 717-668-8736

### **Individuals Who Reside outside of the Central York area:**

Contact the nearest outpatient provider listed on pages 8-10 of this directory to schedule a drug & alcohol assessment.

## Case Coordination

Case coordination is a case management function that occurs throughout the treatment episode. Case coordination facilitates client access to available resources, promotes client retention in treatment and use of support services, while simultaneously educating the client in the skills necessary to achieve and maintain self-sufficiency and recovery from substance-related disorders.

All providers who perform level of care assessments in addition to clinical treatment activities as listed in this directory are contracted to perform case coordination services.

## Specialized Program Descriptions

*For the purposes of this directory, it is important to note that certain populations may require specialized program services in order to appropriately address their treatment needs. These factors should be taken into consideration when determining placement.*

### **Women with Children**

These programs are designed to serve substance-abusing pregnant and/or parenting women with specific pathologies and needs that have arisen in conjunction with their addiction. Treatment of women with children is more complex because of the problems presented by dysfunctional family dynamics, and because of this, the inclusion of children into the overall treatment process is warranted. In addition to meeting the characteristics of a specialized women's program, parental responsibility programs assess and treat women from a holistic, family-centered point of view. The services of these programs are designed using gender-specific, culturally competent treatment models. Parental responsibility programs are characterized by the following: parenting education and support services, as well as family therapy (for parents, significant others, non-resident children, etc.); child development and prevention services including basic assessment of each resident child's level of functioning; coordination of services addressing children's developmental delays and/or mental health concerns; child care provided in an environment which promotes developmentally appropriate socialization, language and communication skills, and gross and fine motor skills. In such an environment, "high risk" families may have an opportunity for unification; coordination of services establishing and maintaining public assistance benefits for herself and her children; child care services; early intervention and/or specialized education services designed to meet the developmental needs of the child; life skills training (e.g. communication skills, and budgeting and household management) that maximizes the client's ability to provide a safe, clean environment for the client and her children; comprehensive treatment planning integrating parent/child activities and basic child development care; a focus on gender-specific issues such as addressing emotional, physical, and/or sexual abuse experiences in the client and her children; educational programs that address parenting and child development skills (e.g. infant stimulation programs); a comprehensive service for children that includes a basic assessment, educational opportunities for developmental impairments, a physical and medical evaluation including a review of immunizations and a report of childhood diseases, and referral, if necessary; alcohol and other drug education for children, including age-specific children's groups to discuss these issues and improve coping skills; education in child custody issues; age-appropriate activities to encourage socialization and academic growth; and the treatment staff of these programs must be certified, and have documented experience in child development, age-appropriate child care, and drug and alcohol prevention and education.

### **Women's Issues**

Substance-abusing women often require specialized care for issues and pathologies that arise as consequences of their addictions. Programs specializing in the treatment of women shall have: education meant to improve decision-making skills and self-esteem; a focus on issues specific to women, such as addressing emotional, physical, and/or sexual abuse, single motherhood, difficulties with child care, and establishing oneself in a largely male-dominated society; extensive case management resources to accommodate the comprehensive needs of women in substance abuse care; educational programs that address parenting and child development skills, the prenatal and postpartum effects of substance abuse on children, and the reestablishment of the mother-child bond, if the child is not in the treatment setting or in the custody of the mother; additional education in the area of preventive health care (e.g. breast exams, pap smears, family planning, the risk of HIV/AIDS and

other sexually transmitted diseases, etc.); life skills training (e.g. communication skills, or budgeting and household management) that can maximize the client's ability to provide a safe, clean environment for herself and her family; education in legal issues (e.g. child custody, protection from abuse, divorce, and discrimination); a safe treatment setting that provides linkages to support groups; assistance in locating appropriate housing; education on eating disorders and referral for treatment; and treatment staff that is hired in a way that reflects the makeup of the client population as well as being certified with documented experience in women's psychology and female-specific treatment.

### **Co-occurring**

Mental illness often coexists with substance use disorders. For treatment to be effective it must be designed to address both illnesses concurrently, and, if possible, in an integrated fashion, since each illness affects the course and severity of the other. Placement in an appropriately designed program will follow from adequate attention to the assessment of both disorders. The following principles should guide the treatment: treatment of both the mental illness and the substance use disorder should be integrated whenever possible (ideally, they should be provided in the same setting by the same treatment team); the treatment team must have professional resources available to ensure that adequate treatment of both disorders is possible (for example, the team should have psychiatric addiction specialists available, as well as other persons with both psychiatric and addiction training); all treatment team members should have some familiarity with the manifestations and etiology of both disorders to facilitate adequate coordination of treatment; treatment planning should be individualized to address specific symptoms of all disorders, while recognizing that treatment will usually incorporate a variety of therapeutic methods which may address either or both of these illnesses; there must be provisions to incorporate the use of psychotropic medications when indicated; and the personnel working with persons who have dual disorders will require training to enable them to understand and effectively address both mental health and substance use problems.

### **Cultural/Ethnic**

People of racial or ethnic minorities often hold different views, values, norms, morals, and beliefs which affect the perception, impact, and severity of alcohol and other drug use. Particular care must be taken by treatment professionals concerning the issues of racism, language, communication styles, cultural and class values, and health-related values. Programs offering this type of specialized treatment must be culturally competent, meaning that they are able to identify and address individual needs based on cultural differences, by way of policies, practices, attitudes, and agency structure. They are also characterized by the following: a program philosophy with cultural perspective that acknowledges that individuals and families make different choices based on differing cultural ideals; treatment that is culturally relevant and includes the discussion of racism and other culturally-specific issues; culturally appropriate diagnostic tools and treatment methodologies; competency concerning the language and non-verbal communication styles typical of members of specific ethnic groups; décor, program material, and literature appropriate to the lifestyle and culture of the group being served; outreach services that mitigate cultural barriers to program access; coordination of services connecting clients to community resources and supports within the appropriate culture; integration of culturally-founded health beliefs and practices into the treatment plan; ongoing plans for training new staff and developing more competent programs; the treatment staff providing this kind of service must be able to communicate verbally and non-verbally with the population in question; and staffing patterns should reflect the makeup of the client population, and the staff should be knowledgeable in the history, culture, and behavior patterns of the client group being served.

### **Sexual Orientation**

Individuals with a homosexual or bi-sexual orientation may present unique treatment needs because of many specific experiences that strongly affect emotions and behaviors. Accepting and affirming attitudes towards gays and lesbians on the part of the treatment staff are crucial to establishing a safe, positive treatment environment. Programs specially designed to treat this population are characterized by the following: a staff that includes other gays and lesbians who publicly identify themselves as such; sponsorship within the gay/lesbian recovery community, and the integration of gay/lesbian/bi-sexual

identity issues into the recovery process; programs that address the specific needs of gay, lesbian, or bi-sexual clients that can interfere with chemical dependency treatment; treatment staff that is well-educated on the specific interrelationships between chemical dependency, is certified, and/or have documented training/experience in areas such as the psychology of homosexuality, merging biological research and findings, the roles of gay, lesbian, and bi-sexual extended families, healthy gay, lesbian, or bi-sexual relationships, issues of civil rights, and HIV/AIDS education.

### **Pharmacotherapy**

Pharmacotherapy is a comprehensive treatment approach, requiring licensure, FDA, DEA, and PA Department of Health approval, where medication and comprehensive therapy and medical services are utilized for treatment of opiate addicted clients. Pharmacotherapies are safe and necessary pharmacological supports to control compulsive drug seeking behavior for chronic narcotic IV and other opiate-abusing clients. Medication can be either agonist (i.e. methadone, LAAM, etc.) or antagonist (Trexan, naltrexone, etc.), providing pharmacologic support to clients while they undergo structured specialized therapy and medical services.

YADAC only funds the Standard Level of pharmacotherapy in the 1A Outpatient setting. At the Standard Level, it is assumed that the patient can sustain him or herself, although he or she would likely not benefit from treatment without the service. The facility provides the pharmacotherapy in addition to psychotherapy for 2+ hours a month.

### **Adolescents**

Adolescents who use alcohol and other drugs differ from adults in significant ways. While substance use disorders in adolescents and adults may have common biopsychosocial elements of etiology, they are different in many aspects of their expression and treatment. Treatment therefore must be approached differently and should be designed to meet the adolescent developmental and other special needs. Ideally, the treatment environment should be physically separate from that for adult patients. Strategies to engage adolescents, channel their energy, and hold their attention are especially critical. Treatment must address the nuances of adolescent experience, including cognitive, emotional, physical, social and more development, in addition to involvement with alcohol and other drugs.

## Level 1A Outpatient Treatment Description and Provider Listing

### **Level 1A Outpatient Treatment**

Outpatient Treatment is an organized, non-residential, drug-free treatment service providing psychotherapy in which the client resides outside the facility. Services are usually provided in regularly scheduled treatment sessions for, at most, 5 contact hours per week. These providers are also responsible for administering the case management core functions of screening, level of care assessment, and case coordination.

## Level 1B Intensive Outpatient Treatment Description and Provider Listing

### **Level 1B Intensive Outpatient Treatment (IOP)**

Level 1B Intensive Outpatient treatment is an organized non-residential treatment service in which the client resides outside the facility. It provides structured psychotherapy and client stability through increased periods of staff intervention. Services are provided according to a planned regimen consisting of regularly scheduled treatment sessions at least 3 days per week, for a minimal of 5 treatment hours a week with a maximum of 10 treatment hours per week. These providers also are responsible for administering the case management core functions of screening, level of care assessment, and case coordination.

## Level 2A Partial Hospitalization Treatment Description and Provider Listing

### **Level 2A Partial Hospitalization Treatment**

Level 2A Partial Hospitalization consists of the provision of psychiatric, psychological, or other therapies on a planned and regularly scheduled basis in which the client resides outside the facility. Partial hospitalization is designed for those clients who would benefit from more intensive services than are offered in outpatient treatment projects, but who do not require 24-hour residential care. This environment provides multi-modal and multi-disciplinary psychotherapy. Services consist of regularly scheduled treatment sessions at least 3 days per week with a minimum of at least 10 hours per week. These providers also are responsible for administering the case management core functions of screening, level of care assessment, and case coordination.

# Level 2B Halfway House Treatment Description and Provider Listing

## Level 2B Halfway House Treatment

Level 2B Halfway House treatment is a community-based residential treatment and rehabilitation facility that provides services for chemically dependent persons in a supportive, chemical-free environment. While this type of service provides substance abuse treatment, it also emphasizes protective and supportive elements of family living, while encouraging and providing opportunities for independent growth and responsible community living, mutual self-help, assistance in economic and social adjustment, the integration of life skills into daily life, and a solid program of recovery. Clients entering this environment must have already had some experience in another type of drug and alcohol treatment. This is a live in/work out environment. A typical length of stay ranges from 3-6 months. These providers also are responsible for administering the case management core functions of screening, level of care assessment, and case coordination.

## Level 3A Medically Monitored Inpatient Detoxification Description and Provider Listing

### **Level 3A Medically Monitored Inpatient Detoxification**

3A Medically Monitored Inpatient Detoxification: A residential facility that provides a 24-hour professionally directed evaluation and detoxification of addicted clients. Detoxification is the process whereby a drug- or alcohol-intoxicated or dependent client is assisted through the period of time required to eliminate the presence of the intoxicating substance (by metabolic or other means) and any other dependency factors while keeping the physiological and psychological risk to the client at a minimum. This process should also include efforts to motivate and support the client to seek formal treatment after the detoxification process. This type of care utilizes multi-disciplinary personnel for clients whose withdrawal problems (with or without biomedical and/or emotional problems) are severe enough to require inpatient services, 24-hour observation, monitoring, and, usually, medication. However, the full resources of an acute care general hospital or a medically managed intensive inpatient treatment system are not necessary. This treatment is specific to psychoactive substance use. The halfway house treatment providers are also responsible for administering the case management core functions of screening, level of care assessment, and case coordination.

## Level 3C Medically Monitored Long Term Residential Treatment Description and Provider Listing

### **Level 3C Medically Monitored Long Term Residential Treatment**

3C Medically Monitored Long Term Residential: A residential facility that provides 24-hour professionally directed evaluation, care, and treatment for addicted clients in chronic distress, whose addiction symptomatology is demonstrated by severe impairment of social, occupational, or school functioning. Habilitation is a treatment goal. Habilitation is the treatment goal. These programs serve clients with chronic deficits in social, educational, and economic skills, impaired personality and interpersonal skills, and significant drug-abusing histories which often include criminal lifestyles and subcultures. These individuals need a model more accurately described as habilitation, as opposed to the rehabilitation model. This service often requires global changes in lifestyle, such as abstinence from mood altering chemicals (other than those needed to treat illnesses), elimination of antisocial activity, a new outlook regarding employment, and the development, display, and integration of positive social attitudes and values. These providers also are responsible for administering the case management core functions of screening, level of care assessment, and case coordination.

# Student Assistance Program (SAP) D&A Liaison Services Description and Provider Listing

## **Student Assistance Program (SAP) D&A Liaison Services**

Each school is required to have a functional SAP Team comprised of school personnel. These functional SAP Teams may also request the addition of a D&A liaison. A SAP D&A liaison shall provide on-site consultation services to the student assistance program team(s) within the assigned school/school districts of the York/Adams Counties. The SAP D&A liaisons receive needed/appropriate direction and supervision provided by an individual knowledgeable about the Commonwealth SAP and capable of providing local system-wide focus and representation. The SAP D&A liaison will:

- Attend core team meetings;
- Provide consultation services;
- Provide intervention services as needed;
- Facilitate access to the appropriate services;
- Facilitate referral to drug & alcohol treatment services, when necessary;
- Participate in and/or facilitate core team maintenance;
- Participate in program evaluation activities;
- Provide relevant trainings to students, parents, faculty and staff;
- Participate in parent/teacher meetings;
- Maintain data for required reporting as determined by YADAC;
- Facilitate and/or co-facilitate school-based support groups;
- Facilitate and support the school-based aftercare plan for students who are returning to school from treatment; and,
- Collaborate with other agency providers.

# Prevention Services Description and Provider Listing

## **Prevention Services**

Prevention involves a proactive process that empowers individuals and systems to deal constructively with potentially difficult life situations, to keep healthy people healthy and to bolster the strength of those at risk. It requires that a measurable, risk-based series of collaborative and culturally relevant strategies be employed to preclude or reduce those uses of drugs and alcohol that have a negative impact on the individual, the family, and the larger society. Negative impact includes the physical, mental, or social consequences that result in the reduction of optimum functioning at home, in school, at work, or in the community. Positive behaviors are defined as those which include increased self-understanding, improved interpersonal and human relations skills, enhanced ability to relate to social institutions, and effective coping behaviors to deal with stress. Prevention activities are targeted at the total populations, with an emphasis on delivering appropriate services prior to the manifestation of inappropriate behaviors. Prevention activities can be delivered through schools, media, family or community agencies and groups.

# Intervention/Outreach Services Description and Provider Listing

## **Intervention/Outreach Services**

Intervention level of care involves the provision of services aimed at assisting the client in coping with a specific crisis or other situation in his or her life, whereby his or her customary modes of adaptation have proven inadequate. Intervention also assists in decision-making and supporting the client until he or she can cope with the situation independently. Referral is provided if the need for a structured treatment regimen or other service is indicated.
